

PROGRAM 9

Implement "N-Queens Problem" using Backtracking.

ALGORITHM

PSEUDO CODE:

```
→ function solveNQueens (board, col, N):  
    if col == N:  
        printSolution (board, N)  
        return true  
  
    res = false  
    for each row in 0 to N-1:  
        if isSafe (board, row, col, N):  
            board [row] [col] = 1  
            res = solveNQueens (board, col+1, N) or res  
            board [row] [col] = 0  
  
    return res  
  
function isSafe (board, row, col, N):  
    for i in 0 to col-1  
        if board [row] [i] == 1:  
            return false  
  
    for i=row, j=col; i>=0 & j>=0; i--, j--;  
        if board [i] [j] == 1:  
            return false  
  
    for i=row, j=col; j<N & j>=0; i++, j--;  
        if board [i] [j] == 1:  
            return false  
  
    return true
```

CODE

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
#define MAX 20
```

```
int board[MAX];
```

```
int N;
```

```
int isSafe(int row, int col) {
```

```
    for (int i = 0; i < row; i++) {
```

```
        if (board[i] == col || abs(board[i] - col) == abs(i - row))
```

```
            return 0;
```

```
    }
```

```
    return 1;
```

```
}
```

```
void printSolution() {
```

```
    printf("\nSolution:\n");
```

```
    for (int i = 0; i < N; i++) {
```

```
        for (int j = 0; j < N; j++) {
```

```
            if (board[i] == j)
```

```
                printf("Q ");
```

```
            else
```

```
                printf(". ");
```

```
        }
```

```
        printf("\n");
```

```
    }
```

```
}
```

```

int solveNQueens(int row) {
    if (row == N) {
        printSolution();
        return 1;
    }

    int found = 0;
    for (int col = 0; col < N; col++) {
        if (isSafe(row, col)) {
            board[row] = col;
            found |= solveNQueens(row + 1); // Try next row
        }
    }

    return found;
}

int main() {
    printf("Enter number of queens (N): ");
    scanf("%d", &N);

    if (N < 1 || N > MAX) {
        printf("N should be between 1 and %d\n", MAX);
        return 1;
    }

    if (!solveNQueens(0))
        printf("No solution exists for N = %d\n", N);

    return 0;}

```

OUTPUT

Enter number of queens (N): 4

Solution:

```
. Q . .  
. . . Q  
Q . . .  
. . Q .
```

Solution:

```
. . Q .  
Q . . .  
. . . Q  
. Q . .
```

TRACING

Tracing

Start with
4x4 empty board

```
0 0 0 0  
0 0 0 0  
0 0 0 0  
0 0 0 0
```

S1: Place Q in col 0
Try r0, c0 → safe → Place queen

```
1 0 0 0  
0 0 0 0  
0 0 0 0  
0 0 0 0
```

Move to col 1

S2: Place Q in col 1
Try r0, c1 → check safety
R0 already has queen at c0 → not safe
Try r1, c1 → Diagonal of (1,1) attacks queen at (0,0) → not safe

* Try r_2, c_1
 * No q in same row, no diagonal attack \rightarrow safe
 Place queen

```

1 0 0 0
0 0 0 0
0 1 0 0
0 0 0 0

```

move to col 2.

S3: Place queen in col 2.

* Try $r_0, c_1 \rightarrow (0,1)$ attack \rightarrow not safe.
 * Try $r_1, c_2 \rightarrow$ diagonal attack from q $(2,1) \rightarrow (1,2)$ upper left diagonal \rightarrow not safe
 * Try $r_2, c_2 \rightarrow r_2$ queen at $c_1 \rightarrow$ not safe
 * Try $r_3, c_2 \rightarrow$ No attack \rightarrow safe
 Place queen \rightarrow

```

1 0 0 0
0 0 0 0
0 1 0 0
0 0 1 0

```

move to col 3

S4: Place q in col 3.

* Try $r_0, c_3 \rightarrow (0,3)$ attack \rightarrow X safe
 * Try $r_1, c_3 \rightarrow$ diagonal attack $(2,1) \rightarrow (1,3)$ - X safe
 * Try $r_2, c_3 \rightarrow r_2$ queen at col 1 attack - X safe
 * Try $r_3, c_3 \rightarrow r_3$ q at c_2 attack \rightarrow X safe

No valid pos in col 3 \rightarrow Backtrack

Back track S1: Remove q from $(3,2)$

```

1 0 0 0
0 0 0 0
0 1 0 0
0 0 0 0

```

S3 continued: Try next row in col 2

* No more rows in col 2 - Backtrack again.

Back track S2: Remove q from $(2,1)$

```

1 0 0 0
0 0 0 0
0 0 0 0
0 0 0 0

```

S3 \rightarrow continued: Try next row in col 1

* Try $r_3, c_1 \rightarrow$ No attack safe \rightarrow place queen

```

1 0 0 0
0 0 0 0
0 0 0 0
0 1 0 0

```

S3 \rightarrow continued: Place queen in col 2.

* Try $r_0, c_2 \rightarrow q$ $(0,2)$ attack - X safe
 * Try $r_1, c_2 \rightarrow$ Diagonal attack from $(3,1) \rightarrow$ X safe.
 * Try $r_2, c_2 \rightarrow$ No attack - safe. \rightarrow place queen

```

1 0 0 0
0 0 0 0
0 0 1 0
0 1 0 0

```

S4: Place Q in col 3.

* Try $(0, 3) \rightarrow (0, 0)$ attack - x Ref

* Try $(1, 3) \rightarrow$ no attack - \checkmark Ref

Place queen.

1	0	0	0
0	0	0	1
0	0	1	0
0	1	0	0

Final step: All queens placed

1	0	0	0
0	0	0	1
0	0	1	0
0	1	0	0
